Geryon security revolving doors and security turnstiles

Efficient Reliable Flexible

> Secure areas require a reliable system for identifying and separating authorized persons. As these areas are usually representative of the building, a secure but at the same time transparent access solution is preferred.

Two product lines

The Geryon product family comprises security revolving doors and security turnstiles. Security revolving doors are suitable both for the interior and for the entrance, whereas security turnstiles can be used for indoor or outdoor areas.

Geryon Security Revolving Doors SRD Security revolving door

Owing to the high transparency grade of the glass elements and a wide variety of colours for the metal parts, all models elegantly blend in with their surroundings. A sophisticated sensor system in compliance with the latest standards prevents users from being injured. Depending on the security requirements, the door may be equipped with a contact mat, scales or internal monitoring. Other variants are reinforced bullet- and burglar-resistant designs, which are certified according to standards RC2 and RC3 respectively. Options like a rotating unit with emergency exit function¹ or a night closure complete the product range.

Geryon Security Turnstiles STS (Security Turnstile)

For this three-winged unit you may either choose U-shaped stainless steel bars or acrylic glass elements for the door wings. Developers aimed to use as little metal as possible in the door design in order to achieve the highest possible level of transparency. The aesthetic design and the low diameter make STS especially suitable for indoor and outdoor areas.

¹ Individual approval required (responsible building authority)

For secure entry to:

- Sensitive areas in administrative buildings, industrial premises, government agencies and ministries
- Banks and financial institutions
- Data and research centres
- Staff entrances at airports
- Nuclear power plants

Advantages of Geryon Security Revolving Doors and Turnstiles

Options for all security requirements

Geryon SRD Security Revolving Doors

- Users cannot become stuck thanks to end point locking
- Safety sensor system according to DIN EN 16005
- Standard version has IR sensor system
- Versions with resistance classes RC2 and RC3
- All-glass units with underfloor drive
- Option with approved emergency exit column
- · Option with in-built scales with weight limits or actual weight
- Option with night closure
- Option with optical separation using SRD Vision

Geryon STS Security Turnstiles

- Users cannot become stuck thanks to end point locking
- Optional U-shaped stainless steel bars or acrylic glass elements instead of straight bars

Barrier-free access can also be provided by the arrangement of hinge doors or sliding doors at the side.

The ideal solution for any access point

Units arranged diagonally for narrow passages – multiple units for staff access at an airport

Flexible integration - security revolving door in a historic setting

Double unit in polished stainless steel design

Stylish solution for installation indoors – security turnstile with acrylic glass barrier elements

SRD Vision – first-rate access security

Optional optical individual access control for maximum safety.

Sensitive areas in particular place increased security demands on access control. The SRD Vision optical separation system, which is integrated into the ceiling, reliably and securely detects whether there is more than one person within a revolving door and allows or denies passage as is appropriate. The special thing about SRD Vision is that it possible to select it both for the three-leaf and four-leaf models.

Application areas:

- Banks/insurance companies
- Prisons
- Government buildings
- Airports
- Power plants
- Laboratories
- Data centres
- Office blocks
- and many more

SRD VISION The watchful eye

Light beam shows the SRD Vision detection area.

The SRD Vision option – the advantages at a glance:

- False acceptance rate (FAR) <1%
- False rejection rate (FRR) <1.6%
- For three-leaved and four-leaved models (rotary cycle 120° and 180° respectively)
- Can be operated in two directions
- Inside diameter ranging from Ø1,800 mm to Ø2,500 mm
- Passage heights ranging from 2,300 mm to 2,900 mm
- No modification of the floor structure is necessary
- Retrofitting possible for security revolving doors with corresponding dimensions (except for Geryon SRD-S01 with glass ceiling) with a passage height of 2,300 mm or higher
- Unaffected by extraneous light
- Evaluation unit is suitable for remote maintenance
- Passage rate with SRD Vision remains at a high level
- No risk of people becoming trapped during power failure (automatic, self-monitored set-up of the unit after power is restored)

Options (depending on unit type)

Construction	tD-E01	SRD-C01	SRD-S01
	SRI	R.	RS
Increase passage height.	•	•	•
Increase upper part of body.	•	•	
Resistance class RC2.	•	•	•
Resistance class WK3.		•	
Underfloor suspension for fixing drive to the raw ceiling.	•	•	Standard
Water tray or waterproof cover of outer part of body, made of light metal.	•	•	
Night closure outside, manual.	•	•	•
Motor for night closure.	•	•	
Monitoring of night closure, notification of status closed or closed and locked.	•	•	•
T25 rotating unit, all-glass version.	•		Standard
T56 rotating unit emergency exit function with manually foldable door leaves on centric bearings (Ø 1800 and larger).	•		
Stainless steel handle horizontal or vertical, installed on door leaf.	•	•	•
Floor element in stainless steel for installation in advance.	•	•	•
Stainless steel plate, may be perforated, to apply floor covering; alternatively waterproof wooden board.	•	•	•
Stainless steel plate for floor element.	•	•	•
Clamping rail for fixing on-site sealing foil, measure X = 150 or larger.	•	•	•
Coir mats or black rubber mats (optionally equipped with arrow) or carpet as cleaning zone.		•	•
Finish			
AISI 304 stainless steel, satin finish or S8 mirror polished.	•	•	•
Finish anodized C0 and C31-35 (E6).	•	•	•
Function			
Automatic starting after entering the security door and after release signal.	•	•	•
Electrical equipment			
Various consoles.	•	•	•
Push button for manual single release.	•	•	•
Electrical key-operated push button.	•	•	•
OPL 01 operating panel, functions can be chosen freely.	•	•	•
Signal device.		•	•
Weight control.	•	•	
Contact mat for monitoring intermediate segment, on SFL or in FFL.	•	•	•
Emergency stop switches with seal cap, instead of the existing ones. $oldsymbol{9}$	•	•	•
Pre-sensors for heavy rotating units, for additional safeguarding of persons requiring special protection. 🏮	•	•	•
Lighting by 2 to 4 LEDs.	•	•	
Security level: SRD			
Basic security is achieved by adequate compartment size, light sensors in intermediate segment and card reader for access control.			

Enhanced security is achieved by	Passage segment	Inter- mediate segment
Contact mat (1 zone).		•
Rotating unit scales.		•
Actual weight scales including rotating unit scales.		•
Scales with weight limit including rotating unit scales.		•
Biometrics outside SRD.	•	
SRD Vision (not for RDR-S01).	•	•

The security level depends on the object to be protected and trust in the authorized users.
